

Plugging into the Future: An Exploration of Electricity Consumption Patterns

1.2 – Purpose of the Project

The purpose of the project "Plugging into the Future: An Exploration of Electricity Consumption Patterns" is to analyse and visualize electricity consumption data to identify trends, patterns, and regional variations in power usage. The project aims to transform raw electricity consumption data into meaningful insights through interactive dashboards and visualizations.

By utilizing data analytics and visualization techniques, the project helps users understand consumption behaviour across different states, regions, and time periods. It also enables the comparison of electricity usage before and after significant events such as lockdowns, highlighting changes in consumption patterns.

The project provides decision-makers, researchers, and energy planners with valuable information that can support efficient energy management, demand forecasting, resource allocation, and policy development. Through an interactive web-based dashboard, users can easily explore data, apply filters, and gain insights into electricity consumption trends for informed decision-making.
